

SOUTH BALTIC TRANSPORT LOOPS

Smart multi-modal transport solutions for medium-sized ports

From 2018 to 2021, the trans-national project partnership (Ports of Elblag, Karlshamn, Mukran and Roenne as well as the Klaipeda Shipping Research Centre) is working in a close cooperation and achieved so far – despite the constraints of the Covid19- pandemic – considerable success.

Several new transport/shipping solutions were established:

- The “Baltic Sea Bridge” for container transport between China and Europe with a frequent shipping connection between Baltiysk and Mukran / Karlshamn.
- New ferry service between Mukran and Ystad.

Further ferry services were significantly improved:

- Roenne – Mukran.
- Karlshamn – Klaipeda.

Noteworthy are also the new hinterland services for passengers and cargo:

- Re-established public bus services to the ports of Karlshamn and Mukran
- Railway hinterland connections for container transport to/from the ports of Karlshamn and Mukran.

Representatives from the project partners.
